

Insulin Wheel

START:

1. Is the latest **blood glucose** **7 mmol/liter** or under **and** has it **dropped** from the previous measurement **by more than 1.5?**

YES: Do not give any insulin this hour

NO: Follow the steps below

2. Rotate wheel to patient's **current glucose level** marked in grey.

3. Determine whether the **glucose level** has increased or decreased and **select the correct side of the wheel**.

4. Using the **selected side of the wheel** from 3, match the **previous insulin bolus** to the **new insulin bolus**.

5. Administer **new insulin bolus** and have colleague double check

6. Use Feed Wheel if you have not done so already
