

Insulin Wheel

START:

1. Is the latest **blood glucose** 7mmol/L or under **and** has it **dropped** from the previous measurement by **more than 1.5**?

YES: Do not give any insulin this hour

NO: Follow the steps below

2. Rotate wheel to patient's **current glucose level** marked in grey.

3. Determine whether the **glucose level** has increased or decreased and **select** the correct side of the wheel.

4. Using the selected side of the wheel from 3, match the previous insulin bolus to the new insulin bolus.

5. Administer **new insulin bolus** and have colleague double check.

6. Use Feed Wheel if you have not done so already.
